Defenshield is providing an unequalled level of protection to the men and women who secure the Constellation Energy nuclear power facility near Scriba, NY.

These partitions, similar to other Mobile Defensive Positions deployed by the Department of Justice, the Department of Homeland Security, and the Department of Defense provide the highest level of protection in a mobile stand-alone device. The Defenshield product line is certified up to NIJ Level III (assault rifles), NIJ Level IV (30-06 armor piercing), and is certified by the US State Department to Standard 01.01 for resistance to both 5.56mm and 7.62mm NATO rounds.

"Defenshield Inc. is proud to be deploying the highest level of protection to Constellation Energy's security team. We know we were carefully chosen based upon performance and aesthetics." said Collins White, President of Defenshield Inc.

The Defenshield is currently available through the GSA Schedule to all federal agencies and state, local, and municipal law enforcement under the Justice Department 1122 program. The GSA Schedule also includes Defenshield's replacement glazing package for the Cadillac/Gage Peacekeeper armored vehicle in use by many law enforcement agencies.

*Defenshield Inc. is a veteran-owned, New York corporation manufacturing bullet and blast resistant, portable, stand-alone partitions for law enforcement, public security, homeland defense, and the military. The Defenshield product line offers the highest level of security, defeating armor-piercing weaponry, assault and sniper rifles, as well as handgun and shotgun rounds. Uses include hostage negotiations, personnel protection, and the immediate establishment of security checkpoints whenever and wherever a higher level of personal protection is necessary.*
