

MAG-D™

Molle-Adaptable Grenade Dispenser

Defenshield, Inc.

Increase your combat load

The MAG-D system consists of a molle-adaptable grenade dispenser and transport pouch designed to give frontline soldiers easy access to 40mm HE-DP grenade loads. Worn outside the uniform and gear, MAG-D dramatically increases a grenadier's combat load – with each system holding and dispensing up to 5 HE-DP or TP rounds. MAG-D eliminates the need to carry rounds in cargo pockets or drop pouches with snaps that may seize shut.

Access your rounds in no time, every time

Designed for muscle memory training, MAG-D dramatically increases a soldier's rate of fire. MAG-D enables the operator to remove rounds from the dispenser at the same location every time, ensuring that their hand is always holding the round in proper form to load the weapon. The dispenser provides a fluid motion, quick round release and has a built-in loading assistant for smooth and fast loading, so units spend less time managing ammunition and more time engaging the enemy.

Designed for the frontline

MAG-D is built to withstand today's harsh combat environments. The dispenser is constructed of the toughest polymers available and utilizes a rust-resistant spring. The system features a free floating follower with guide ribs that allow large amounts of mud, sand and debris to pass through the drain holes to prevent jamming. MAG-D is virtually maintenance free and requires no disassembly.

Specifications

Product Name: MAG-D

Description: Molle-adaptable grenade dispenser and transport pouch

Capacity: 5 HE-DP or TP 40mm grenade rounds
