

# MDFP Accessories

## Bridgeport™

The Bridgeport is an armor panel used to connect two Defenshield MDFPs at a 45-degree angle. Multiple Bridgeports and MDFPs may be connected in a series to form a ballistic- and blast-resistant fortification. A closeable port is incorporated into the armor face of each Bridgeport, providing a safe firing position for a variety of weapons from within the

units. A side gun mount for the MDFP is also available, as well as heaters, shelves and pullout drawer systems.

Like the MDFP, Bridgeport units are available with up to NIJ Level IV 30-06 Armor-Piercing Resistant protection. The unit is 2 feet wide and 6.5 feet tall. The Bridgeport's steel armor features a durable anti-corrosion powder-coated finish. Camography™ is also available to match the color and camouflage of your Bridgeport to your MDFP.

Assembly of the Bridgeport unit is quick and easy, and can be completed in the field without the use of tools. Two soldiers can attach a Bridgeport to two MDFPs in approximately five minutes.

Rear view of Bridgeport from the safe side of the MDFPs.

## Tow Bar

The Tow Bar accessory is an attachment designed for MDFPs with ATV tires, which enables the unit to be towed with a vehicle. Available in pintle ring or 2-inch ball receiver configurations, the Tow Bar makes it quick and easy to move the MDFP short distances, such as across a military base, for use at another location.

MDFPs with Bridgeport, Awning and Gun Mount accessories.

## Specifications

**Product Name:** Bridgeport  
**Description:** Connection panel between two Defenshield Mobile Defensive Fighting Positions (MDFPs)  
**Protection:** NIJ Level IV  
**Weight:** 250 lbs

**Product Name:** Tow Bar  
**Description:** Attachment for towing the MDFP with ATV tires  
**Weight:** 73 lbs

**Product Name:** Awning  
**Description:** Weather resistant overhang for the MDFP  
**Weight:** 27 lbs

## ***Tow Bar (cont.)***

---

Utilizing the MDFP's existing tires for mobility, the Tow Bar assembly attaches to the unit's ATV tire axle. This attachment requires no tools and can be completed in approximately five minutes. Once attached to a vehicle, the MDFP can be towed at speeds of up to 10 miles per hour. The Tow Bar and MDFP are designed for off-highway use.

## ***Awning***

---

The Awning accessory is designed to protect personnel utilizing the MDFP from sun, precipitation and other natural elements. Troops are able to stay alert while remaining as comfortable as possible in all weather conditions.

With a standard size of 36 inches x 52 inches, the Awning can be quickly and easily attached to or removed from the MDFP without the need for tools. This attachment is not ballistically-rated.

## ***Camography™***

---

Camography is a fully customizable photo laminate which is added to MDFP and SafePoint units instead of traditional camouflage to make the unit look natural and ensure maximum concealment in any environment.

Camography can also be applied to the transparent armor panel of the unit with a one-way see-thru film. Whether used in diplomatic or government facilities – or forests, deserts and other outdoor settings – images of the location in which the unit will be deployed, from brick walls to grasslands, can be matched in exact color and scale.

**All MDFP accessories are available through the GSA Schedule. They are also on the DHS Authorized Equipment List and funding is available through the DHS Homeland Security Grant Program (HSGP).**
